

Your Trusted
Manufacturer in Machining
Brass Components

ELKOM[®]

ELKOM SDN BHD specializes in brass forging and machining, providing high-quality components designed to meet the rigorous demands of various industries. With a strong commitment to excellence and reliability, we deliver tailored solutions that combine technical expertise with competitive value.

Our operations are based in a 28,000 square meter facility, accredited with the ISO 9001:2015 Quality Management System by Lloyd's Register Quality Assurance. Backed by an experienced and professional team, we ensure every product reflects our dedication to precision and quality.

ELKOM is equipped with forging machines ranging from 125MT to 1200MT. The forging process involves heating and pressing materials into shape using precision dies, which significantly enhances the product's strength, reliability, and cost efficiency. In addition, we operate a wide range of CNC machines that enable high-precision machining to meet the exact requirements of our customers.

With both forging and CNC capabilities, we are able to produce a wide variety of brass components including brass nuts, brass fittings, brass inserts, brass bolts, brass fasteners, brass transformer parts, and many other customized brass components.

At ELKOM, our goal is to build long-term partnerships by consistently delivering value, quality, and trust. From raw material selection to final inspection, every stage of production undergoes stringent quality control to ensure the highest standards are achieved.

For enquiries on brass components, please contact us at **03-87271488** or email **sales@elkom.com.my** for further information.
